

Řešení domácího úkolu 6

Spočítejte následující limity pro $m, n \in \mathbb{N}$ a $a > 0$

1.

$$\lim_{x \rightarrow -8} \frac{\sqrt{1-x} - 3}{2 + \sqrt[3]{x}},$$

(1 bod)

$$\begin{aligned} \lim_{x \rightarrow -8} \frac{\sqrt{1-x} - 3}{2 + \sqrt[3]{x}} &= \lim_{x \rightarrow -8} \frac{\sqrt{1-x} - 3}{2 + \sqrt[3]{x}} \frac{\sqrt{1-x} + 3}{\sqrt{1-x} + 3} \frac{4 - 2\sqrt[3]{x} + x^{\frac{2}{3}}}{4 - 2\sqrt[3]{x} + x^{\frac{2}{3}}} = \\ &= \lim_{x \rightarrow -8} \frac{1-x-9}{8-x} \frac{4-2\sqrt[3]{x}+x^{\frac{2}{3}}}{\sqrt{1-x}+3} = -\frac{12}{6} = -2. \end{aligned}$$

2.

$$\lim_{x \rightarrow 1} \left(\frac{m}{1-x^m} - \frac{n}{1-x^n} \right),$$

(2 body)

$$\begin{aligned} \lim_{x \rightarrow 1} \left(\frac{m}{1-x^m} - \frac{n}{1-x^n} \right) &= \lim_{x \rightarrow 1} \frac{m(1-x^n) - n(1-x^m)}{(1-x^m)(1-x^n)} \stackrel{x=1+h}{=} \\ &= \lim_{h \rightarrow 0} \frac{m(1-(1+h)^n) - n(1-(1+h)^m)}{(1-(1+h)^m)(1-(1+h)^n)} = \\ &= \lim_{h \rightarrow 0} \frac{m(1-(1+nh+\frac{n(n-1)}{2}h^2+o(h^2))) - n(1-(1+mh+\frac{m(m-1)}{2}h^2+o(h^2)))}{(1-(1+mh+o(h)))(1-(1+nh+o(h)))} = \\ &= \lim_{h \rightarrow 0} \frac{-m\frac{n(n-1)}{2}h^2 + n\frac{m(m-1)}{2}h^2 + o(h^2)}{(mh+o(h))(nh+o(h))} = \lim_{h \rightarrow 0} \frac{-mn(n-1) + nm(m-1) + o(1)}{2(m+o(1))(n+o(1))} = \frac{m-n}{2}. \end{aligned}$$

3.

$$\lim_{x \rightarrow a} \left(\frac{\sin(x)}{\sin(a)} \right)^{\frac{1}{x-a}}.$$

(2 body)

$$\begin{aligned} \lim_{x \rightarrow a} \left(\frac{\sin(x)}{\sin(a)} \right)^{\frac{1}{x-a}} &= \lim_{x \rightarrow a} e^{\frac{1}{x-a} \ln\left(\frac{\sin(x)}{\sin(a)}\right)} \stackrel{x=a+h}{=} \lim_{h \rightarrow 0} e^{\frac{1}{h} \ln\left(\frac{\sin(a+h)}{\sin(a)}\right)} = \lim_{h \rightarrow 0} e^{\frac{1}{h} \ln\left(1 + \frac{\sin(a+h)}{\sin(a)} - 1\right)} = \\ &= \lim_{h \rightarrow 0} e^{\frac{\frac{\sin(a+h)}{\sin(a)} - 1}{\frac{\sin(a+h)}{\sin(a)} - 1} \ln\left(1 + \frac{\sin(a+h)}{\sin(a)} - 1\right)} = \lim_{h \rightarrow 0} e^{\frac{\frac{\sin(a+h)}{\sin(a)} - 1}{\frac{\sin(a+h)}{\sin(a)} - 1} \frac{\sin(a+h) - \sin(a)}{h}} = \\ &= \lim_{h \rightarrow 0} e^{\frac{\sin(a+h) - \sin(a)}{h}} = \lim_{h \rightarrow 0} e^{\frac{\sin(a) \cos(h) + \sin(h) \cos(a) - \sin(a)}{h}} = \\ &= \lim_{h \rightarrow 0} e^{\frac{\cos(h) - 1}{h^2} h + \frac{\sin(h)}{h} \cot(a)} = \lim_{h \rightarrow 0} e^{\underbrace{\frac{\cos(h) - 1}{h^2}}_{\rightarrow 1} h + \underbrace{\frac{\sin(h)}{h}}_{\rightarrow 1} \cot(a)} = e^{\cot(a)}. \end{aligned}$$
